Cruise Lines International Association (CLIA) provides a unified voice for the industry as the leading authority of the global cruise community. Together with its members and partners, CLIA supports:

- Policies and practices that foster a safe, healthy and sustainable cruise operations;
- Tourism strategies that maximise the socio-economic benefits of cruise travel; and
- Technologies and innovations that protect and preserve our planet.

CRUISE BY THE NUMBERS

Intent to cruise continues to be strong among Forever Cruisers and Potential New Cruisers.

- 12% of cruise travelers cruise twice a year.
- 10% of cruise travelers take three to five cruises a year.

82% of those who have cruised will cruise again

71% of international travelers are considering taking their first cruise

Source: CLIA Sentiment Perception and Intent Survey (March 2024)
Global cruise capacity is forecast to grow at least 10% from 2024 to 2028.

Cruise capacity projections
(number of cruise ship berths)

Source: CLIA Forecast
Cruise tourism is resilient—rebouncing faster than other forms of travel and tourism.

Cruise travel reached 107% of 2019 levels in 2023—with 31.7 million passengers sailing.

This compares to overall international tourism arrivals, which are 12% lower than 2019.

By 2027, cruise is forecast to grow to nearly 40 million passengers.
The future of cruise is the younger generation.

Millennials are the most enthusiastic about planning a cruise holiday

CRUISE BY THE NUMBERS

Average age of a cruise traveler (36% are under the age of 40)

Millennials are the most enthusiastic cruise travelers of the future

Source: CLIA Cruise Traveler Sentiment, Perception, and Intent Survey (March 2024); cruise travelers who have cruised in the past two years
Cruise is a global industry, with cruise lines operating in every major world region.

Percentage of cruise passengers traveling by cruise to the world’s regions

Top 10 Source Markets in 2019 and Respective Passenger Volume in 2023

- During 2023, there were significant relative gains in passengers cruising from Brazil, Italy and the UK.
- All other markets generally returned to levels similar to 2019.
- Most increases were in the United States, with an incremental increase of 2.7 million passengers, 19% higher than 2019.
- China re-opened in September 2024, and while there was a surge in cruise passenger volume, it wasn’t enough to return the market to its status as a major source market.

Source: CLIA 2023 Global Passenger Report
Aside from decline in China, gains were distributed among the top destinations to varying degrees.

The Caribbean, which continues to be the world’s most visited region by cruise, gained almost 1 million new cruise visitors in 2023 compared to 2019.

Cruise destinations with the highest percentage increases in travelers include:

- The Mediterranean
- North America’s West Coast
- South America
- Alaska

Source: CLIA 2023 Global Passenger Report
About the Industry

Plenty of room for growth:
- Cruise is currently only 2% of the travel and tourism sector.

Strong and resilient:
- Consistent and steady growth over the past 50 years—with cruise more resilient than other sectors through downturns.

Responsible and sustainable:
- Cruise is one of the safest ways to travel—and is becoming one of the most responsible and best ways to see the world—with cruise lines advancing an ambitious sustainability agenda.
Cruise ships comprise < 1% of the world's commercial fleet.

- 25% general cargo ships
- 23% bulk carriers
- 20% ferry/ro-ro passenger ships
- 13% oil and LNG tankers
- 10% container ships
- 8% chemical tankers
- <1% cruise ships (300 total)
CRUISE TRENDS
Welcome Aboard: An increasing number of new-to-cruise travelers are choosing a holiday at sea.

27% of cruisers in the past two years are new-to-cruise, an increase of 12% compared to the prior two-year period.

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
Millennials and Gen Z are more likely to travel solo than other generations.

8-13% of cruise travelers are traveling solo

8% on average globally,
10% from U.S. ports,
13% from Canada ports

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
Cruises are a top choice for multi-generational travelers—with one-third of families sailing with at least two generations.

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)

28% of cruise travelers sail with three to five generations.
CRUISE TRENDS

The ability to visit multiple destinations + value for the money are the top reasons cruisers love to cruise.

11% of cruise travelers only considered cruise for their holiday this year

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
Expedition and exploration are the fastest-growing cruise itineraries being sailed.

The number of passengers sailing on expedition itineraries has increased 71% from 2019 to 2023.

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
CRUISE TRENDS

Cruise lines are investing in private islands and beach clubs, including enhancing existing ones.

New private islands or beach clubs opening in the next two years

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
Travel advisors meaningfully influence traveler decisions to cruise; the main driver for working with a travel agent is their advisor’s knowledge and experience.

CRUISE TRENDS

73% of cruise travelers say travel advisors have a meaningful impact on their decision to cruise

Source: CLIA Sentiment, Perception and Intent Survey (March 2024)
45% of cruise travelers booked an accessible shore excursion in the past year.

Source: CLIA Sentiment, Perception and Intent Survey (March 2024); data regarding the number of accessible shore excursions provided by Sage Inclusion.
CHARTING THE FUTURE OF SUSTAINABLE CRUISE TRAVEL
Cruise lines are pursuing net-zero emissions by 2050

- Reducing emissions at berth and at sea
- Pursuing fuel flexibility, conducting multiple trials
- Making substantial and concrete investments in environmental technologies and practices
CHARTING THE FUTURE OF SUSTAINABLE CRUISE TRAVEL

CLIA-member cruise lines are sailing to a better future: Reducing emissions at berth and at sea by investing in technologies, infrastructure and operational efficiencies.
The cruise industry is investing billions in new ships and engines that allow for fuel flexibility to use low to zero-GHG fuels, once available at scale, with little to no engine modification.

- These fuels and energy sources include green methanol, bioLNG and synthetic LNG, hydrogen fuel cells, photovoltaic/solar (in use on five ships today), battery storage, wind (in use on three ships today)
Pursuing fuel flexibility by investing in propulsion technologies with conversion capabilities for the future.

- Cruise lines are building the ships of the future, which will run on new, more sustainable engine technologies.
- There are 32 pilot projects and collaborative initiatives underway with sustainable fuel producers and engine companies testing sustainable fuels and technologies.

**32 PILOT PROGRAMS**

- **24 SHIPS** trialing biofuels
- **10 SHIPS** using, trialing, or incorporating fuel cells into new-build ships*
- **10 SHIPS** using dual or tri-fuel capable engines

---

* Fuel cells are currently being incorporated into 6 new-build ships, 3 ships in trials/pilot programs, and 1 ship sailing today

An increasing number of vessels sailing and launching over the next five years will either use alternative fuels or be able to incorporate zero-carbon fuels once available at scale.
CHARTING THE FUTURE OF SUSTAINABLE CRUISE TRAVEL

CLIA-member cruise lines utilize a range of technologies and innovations to advance their sustainability initiatives.

**Advanced Wastewater Treatment Systems (AWTS)** — CLIA cruise line members have committed to not discharging untreated sewage anywhere in the world during normal operations. Cruise lines also utilize AWTS, which operate to a higher standard than shoreside treatment plants in many coastal cities and go well beyond international requirements.

**Water Conservation** — State-of-the-art systems and practices enable cruise lines to produce up to 90% of water on board rather than draw from areas where resources are limited.

**Repurposing and Reducing Waste** — Some ships are able to repurpose 100% of waste, transfer surplus heat from machinery to heat water for showers and pools, and significantly reduce food waste by using bio-digesters.

**Fuel Flexibility** — Propulsion technologies with conversion capabilities are easily adaptable for the use of bioLNG, synthetic LNG, or methanol when these fuels become available at scale.

**Systems Designed to Protect Marine Life** — CLIA members agree to avoid or voluntarily reduce vessel speed in sensitive areas; in addition, many ships have underwater noise and vibration reduction systems, as well as scientists on board to support important ocean and marine life research.

**Exhaust Gas Cleaning Systems (EGCS)** — EGCS technology installed on ships is designed to remove 98% of sulphur and well over 50% of particulate matter, with a 12% reduction in NOx.

**Onshore Power Systems (OPS)** — Plugging in when ships are in port allows ship engines to be switched off for significant emissions reductions. Today, 120 ships (46% of the fleet and 52% of global capacity) have the ability to plug in in ports where the infrastructure is available.

**Air Lubrication Systems and Hull Coatings** — Air lubrication systems and coatings for ship hulls reduce drag and, as a result, increase fuel efficiency by nearly 10%.

THE PRESENT AND FUTURE VALUE OF CRUISE TOURISM
ECONOMIC IMPACT

In 2022, cruise generated 90% of economic impact compared to 2019, despite passenger volumes 70% of 2019 levels.*

- The economic contribution from cruise to the economy is enormous despite cruise being just 2% of international travel.
- $138 billion in total economic impact globally, supporting 1.2 million jobs worldwide and $43 billion in wages.
- In 2023 (results to be published in September 2024), the impact will be even greater given the 50% increase in the number of passengers sailing in 2023 compared to 2022.

* In 2019, with 29.7 million passengers sailing, the cruise sector generated $155 billion in global economic output.

Source: CLIA Economic Impact Study | Tourism Economics
More than 75% of jobs supported by cruise activity are generated by the industry’s onshore activities, particularly at ports.

- Approximately 910,000 jobs were attributable to the industry’s global onshore activities, particularly at ports, including direct, indirect, and induced employment effects.
- Almost 462,000 jobs were generated through direct effects, 257,000 came through indirect effects, and 191,000 through induced effects.
- In addition, 301,000 jobs were provided by cruise lines. The sum of jobs linked to cruise lines economic impact at ports (910,000) and employment sustained by the cruise lines directly equates to 1.2 million jobs.

Source: CLIA Economic Impact Study | Tourism Economics
Cruise tourism brings economic and social benefits to communities that extend beyond the cruise.

**ECONOMIC IMPACT**

More than **6 IN 10** who have taken a cruise say that they have returned to a destination that they first visited via cruise ship.

From hotel stays before and after a sailing, to return visits for longer long-based holidays after their cruise, cruise tourism is a powerful part of the travel and tourism sector.

**Approximately 910,000 jobs** were attributable to the industry’s global onshore activities, particularly at ports, including direct, indirect, and induced employment effects.

Every **24 CRUISERS** worldwide supports one full-time equivalent job.
